

Lecture 05

Important Notes:

- Exam #1 Feb 2nd (in class)
 - Online exam #1 due Monday night (Feb 1st)
 - ↳ you get 2 hours
 - ↳ focused on text book content
 - ↳ ~50 questions
 - Group blog original post due Wednesday (Jan 27)
 - Due dates for online assignments reset.
-

Meiosis Activity

Prophase

Metaphase

Anaphase

Telophase

Cytokinesis

Meiosis Summary Recap

- ↳ Where: In dividing cells
- ↳ When: After interphase
- ↳ Why: as a method of cellular reproduction, i.e. to pass on DNA.

■ DNA → RNA → Protein

DNA codes for Proteins

■ Protein Structure

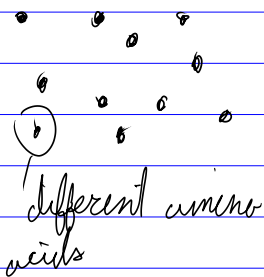

amino acid structure

R-group } → 20 different R-groups
↳ 20 different amino acids

The R-group determines the utility of the amino acid.

Monomers

Amino Acid Polymer

■ Protein Building

S: Serine

T: Threonine

Q: Glutamine

E: Glutamic Acid

} Not expected to know

Gene expression

Exons may reorder when introns are removed

Important

- * Genetic Code is universal
↳ All species use the same DNA → RNA → Protein
- * Nonambiguous → No ambiguous matchings
- * Redundant → Different sequences code for the same protein.

Gene Expression Activity

DNA TAC CGCGCG GGC CGCGCG TAT CGCGCG AAC
AUG [intron] CCG [intron] AUA [] UUG

DNA CGCGCG TGT CGCGCG ATT
[] ACA [] UAA

mRNA AUG CCG AUA UUG ACA UAA
